AssureERP for Workday

Reliable, risk-free Workday testing across every update, integration, and workflow

The business dilemma

Organisations rolling out Workday often discover critical defects and user issues after UAT or worse, post go-live. When system validation, testing, and change adoption come too late, the programme's ROI takes a hit.

Despite heavy investment in Workday, critical gaps are often discovered too late:

- Bugs and defects surface after UAT, when fixes are most expensive
- Key workflows fail under real-world conditions
- End users encounter errors, confusion, or clunky workflows
- Employees fall back on spreadsheets, emails, or legacy systems

The result? Major defects reach production, causing Payroll, HCM, or Financial systems to malfunction at launch. This leads to lost user trust and a fallback to outdated tools.

Our AssureERP approach to Workday success

A proactive AssureERP strategy to catch issues early and ensure a smooth Workday deployment with thorough testing and team collaboration:

- Up to **80% reduction** in QA workload for business users
- More than **80%** critical business processes covered
- Up to **50%** reduction in total UAT costs
- **50% faster testing times** from UAT to go live
- Early-stage validation of integrations and configurations
- Persona-based testing to reflect real employee use cases
- Dry-run go-lives to surface timing and data issues

Real success stories

When a UK financial services provider faced a critical system migration, they couldn't afford disruption. Our approach delivered:

2i's approach ensured test cases reflected our real processes. My HR team could focus on organisational change and worry less about technology change!"
